

Did you know that an exploratory mission like NASA's New Horizons is supported not only by space scientists and engineers, but also by people with seemingly unrelated career expertise? Geologists study surface structures, quality assurance engineers ensure precise construction, accountants keep budgets on track, technicians construct hardware, educators share knowledge with students of every age, and so on. Getting New Horizons to the Pluto system has taken the contributions of thousands of people with diverse backgrounds from around the world. Maybe you can someday support the first mission beyond our solar system!

it takes a team
